## Guidance on Health and Safety for Television Hosts, Technical Crews and other TV and Film Employees during COVID-19

### **OVERVIEW**

**This is not a legal document and employers are advised to seek legal advice.**

Employers and constructors have obligations to protect workers from hazards in the workplace as set out in the *Occupational Health and Safety Act* (OHSA) and its regulations and the directives coming from the Chief Medical Officer of Health.

Workers should raise any concerns to their:

- supervisor
- joint health and safety committee
- health and safety representative

This will help ensure the employer has taken all reasonable precautions.

Ontario is currently in the midst of a global pandemic. While the COVID-19 situation is changing rapidly, the legislation and regulations used to govern Ontario's workplaces are not.

Under Ontario law, employers have the duty to keep workers and work sites safe and free of hazards. Workers have the right to refuse unsafe work. If health and safety concerns are not resolved internally, a worker can seek enforcement by filing a complaint with the ministry's Health and Safety Contact Centre at 1-877-202-0008. Failure of the employer or constructor to comply with the OHSA and its regulations could result in a stop-work order upon inspection by the Ministry of Labour, Training and Skills Development.

### **BEST PRACTICES**

We know that every workplace is unique. That makes it so important that every workplace assess functions carried out by their workforce to ensure they take action to protect against the hazards presented by COVID-19.

Things like proper hand hygiene, keeping surfaces and objects clean and physical distancing (staying 2 metres apart) to prevent close contact with potentially infected people are all critically important measures. Other information on how you can protect yourself is available on [ontario.ca/coronavirus](https://ontario.ca/coronavirus).

We have provided some protection advice below for your consideration. Please keep in mind that introducing any new protective measures should be done as part of a full review of other workplace hazards -- not just COVID 19 alone. Employers should consult with Joint Health and Safety Committees/Health and Safety Representatives in the workplace on measures to protect workers in the workplace. We want to ensure we enhance our safety, not cause other issues.

Some workplaces already have some existing controls in place that may help reduce the risk of exposure to workers as well, so regular 'check-ins' on how controls are helping is highly recommended.

## **RECOGNIZE HAZARD/ASSESS RISKS**

For television hosts, technical crews, wardrobe or videographers, we recognize that you will have contact with various people and surfaces as you go about your work. You could also potentially come in contact with respiratory droplets from these interactions. COVID-19 can travel in respiratory droplets that are released into the environment by laughing, coughing or sneezing.

Take a look at where you might minimize those risks within your workplace. Consult public health information to learn the symptoms of COVID-19 infection. Recognize and report hazards and use appropriate controls. Ensure that you or your co-workers stay home if you or they have symptoms.

We understand – so it's important to take a look at where you can possibly minimize those risks within your workplace. Take a look at the controls below to see how they may assist you.

## **CONTROLS**

To protect yourself consider the following options:

- Are there tasks you can minimize or eliminate? For example, can you work from home or minimize the number of guests present one time?
- Is there an opportunity to put barriers in place between yourself and people you have to interact with?
- Is there an opportunity to improve fresh air intake/air circulation in the workspace?
- Is it possible to control how many people you're interacting with? Physical distancing is recommended, so if you can enforce distance between people, it's recommended to do so.
- Mark the distance for workstations and seats for guests to maintain physical distance. Consider the use of technology to communicate and interview guests. Consider long handles for microphones rather than arm's length/hand-held.
- Increase your cleaning frequency – on everything from desks, seats and vehicles to commonly touched surfaces like cameras, computers, microphones, phones, door handles and switches. Be sure to follow safe practices and use an appropriate cleaning agent.
- Ensure laundering instructions are being followed for wardrobe.
- Review sanitation practices for hair and makeup stations to avoid spreading the virus and implement new practices.
- Be sure to keep up with good hand washing and avoid touching your face. Extra handwashing is a good idea for everyone – and when that's not possible, a good hand sanitizer should be used frequently.
- Keep up with the latest. Consider regular times to check in with public health updates and retrain/revise practices as needed.

If the above recommendations are not enough for your workplace, as a last resort, consider Personal Protective Equipment (PPE). PPE is only effective if people wear it correctly. Workers need PPE training that includes the fit, use, care, maintenance, cleaning and limitations of the PPE.

Some examples of PPE that may be suited to supervisors, production or operations management work include:

- Gloves – single use gloves can help limit skin contact with surfaces, product etc. Be sure to set up practices for proper removal of gloves and suitable disposal or changing when they are soiled. It's also important to consider other hazards present in the workplace before introducing gloves – in some cases, gloves can be an entanglement hazard and should not be worn.
- Goggles or Face Shields – can help create a barrier and separation too. They should be assigned to individuals and not shared and can be reused regularly if kept clean. Ensure the goggle or face shield use does not result in workers touching their faces more often because of heat or discomfort.

## **EVALUATION**

COVID 19 has presented all of us with challenges we have never seen before. It's important to consider that any of the adjustments we are making today, may need further adjustment tomorrow.

It is recommended that you take a look at your preventative measures on an ongoing basis, and adjust them if they are not working well enough or causing other issues with your work. For example, if you decided to use goggles, but they are fogging up and making other tasks unnecessarily difficult, you may want to try a face shield instead. Or if you decided you needed a certain kind of disinfectant and it's no longer available, switching to good soap and water practices may be a reasonable substitute.

Bottom line? Plan to make regular check-ins part of *your* COVID 19 prevention plans.
